

Infinity Hash

EXECUTIVE SUMMARY Q3 2024

August 9th, 2024

Introduction

Founded in June 2023, Infinity Hash is revolutionizing the Bitcoin mining industry with its innovative reinvestment system designed for long-term growth and sustainability. At the heart of this innovation stands a unique share system, featuring Infinity Hash Shares (IHS) and their tokenized counterpart, xIHS. These shares represent participation in the whole mining operation, entitling shareholders to receive daily rewards generated from the entire mining infrastructure. This share system removes all access barriers to Bitcoin mining, while providing full custody, and the possibility to cash out at any point.

Infinity Hash also highly values transparency and community involvement, ensuring that all operations are open, and all information is accessible to investors. Additionally, by leveraging some of the lowest electricity costs in the industry, the project maximizes profitability and sustainability for its investors.

Core Proposition

The cornerstone of Infinity Hash's success lies in its reinvestment system, which ensures long-term sustainability and continuous growth. By reinvesting 50% of the mining rewards into acquiring additional mining equipment, Infinity Hash maintains and increases the hash rate backing each share, and ultimately each share's value and returns over time. This approach ensures the project's long-term viability, making it unique in the Bitcoin mining sector.

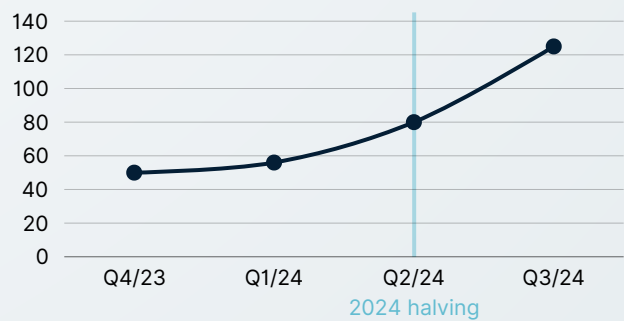

Infinity Hash also prioritizes ease of use and accessibility, offering a hands-off investment experience. Its share system, including IHS and the xIHS token, provides daily rewards without the need for user action. This way, Investors can effortlessly participate in Bitcoin mining without the need for technical expertise or significant capital. With the flexibility to self custody xIHS and cash out at any time, Infinity Hash makes Bitcoin mining straightforward and accessible to everyone, offering a seamless way to profit from the industry.

First Year Performance

In its first year of existence, Infinity Hash has experienced substantial growth, propelled further by the current Bitcoin bull market. Since August 2023, the project's total hash rate has increased more than tenfold. Thanks to Infinity Hash's reinvestment strategy, the hash rate backing each share has nearly tripled from 50 GH/s to 125 GH/s since last year.

Hash Rate Per Share (IHS) in GH/s

On the back of these increases, Infinity Hash shareholders have enjoyed significant benefits. The platform's reinvestment strategy and efficient mining operations have driven impressive APR, significantly outpacing traditional mining investments.

Full APR of Infinity Hash (targeting +/-33%)

Infinity Hash's share price fluctuates with Bitcoin's price and per share mining rewards. As Bitcoin has doubled in price since last year, and with rising hash rate, the price per share has multiplied from \$1.0 this time last year to \$2.2 now. The combined effect of the rising APR and share price appreciation would have brought a profit of around 200% over the last year. An investment of \$1,000 in August last year would be worth over \$2,750 today.

Portfolio value Q3/23–now (without rewards)

Tokenizing Bitcoin Mining – The xIHS Token

xIHS is a tokenized version of Infinity Hash Shares (IHS) on the Solana blockchain, designed to offer additional flexibility to investors. By staking IHS into the xIHS staking pool in the dashboard, shareholders receive xIHS tokens representing the staked shares. The rewards produced by the IHS in the staking pool are used to buy additional IHS. This way, xIHS tokens accrue value as they are backed by an increasing amount of IHS in the pool. Holders of xIHS can realize this value at any time by selling or unstaking their tokens.

This system allows Infinity Hash to provide daily rewards without the need for ten-thousands of daily transactions. Additionally, xIHS tokens are fully transferable and sellable, allowing investors to manage their investment as they see fit.

Transparency and Trust

Infinity Hash prides itself on complete transparency, providing public access to mining data, energy costs, and equipment purchases. Each miner is assigned a unique ID, allowing stakeholders to link data from the project's monthly reports with those on Infinity Hash's public mining pool. Additional weekly updates offer continuous insights and overview.

Market Position, Strategic Expansion & Growth Potential

Infinity Hash launched in June 2023 and is swiftly becoming a major player in the Bitcoin mining industry. With electricity costs already below industry averages, the project aims to reduce expenses even further by strategically opening new mining locations and utilizing flare gas and heat recovery technologies.

Infinity Hash's expansion into regions with access to ultra-low-cost energy, such as Central Asia (\$0.012/kWh) and Northern Asia (\$0.015/kWh), positions it to deliver unparalleled profitability:

Location 1: South Urals, Asia

- Operating: Since 2023
- Energy price: \$0.045 / kWh
- Energy source: Hydro
- Free capacity: 20 MW

Location 2: Northern Asia

- Mining starts: EOY 2024
- Energy price: \$0.015 / kWh
- Energy source: Flare gas
- Free capacity: 100 MW

Location 3: Ethiopia

- Mining starts: EOY 2024
- Energy price: \$0.035 / kWh
- Energy source: Hydro
- Free capacity: 300 MW

Location 4: Finland

- Mining starts: 2025
- Energy price: \$0.040 / kWh
- Energy source: Mixed + heat recovery
- Free capacity: 25 MW

Location 5: Central Asia

- Mining starts: Q1-Q2 2025
- Energy price: \$0.012 / kWh
- Energy source: Hydro
- Free capacity: 200 MW

Location 6: Sweden

- Mining starts: 2025–2026
- Energy price: \$0.025 / kWh
- Energy source: Mixed + heat recovery
- Free capacity: 400 MW

The project is well-positioned to scale and aggressively expand its operations during the Q3 and Q4 2024 investment period. These developments will enable Infinity Hash to further enhance both efficiency and profitability.

Investment Opportunity in Q3

The Bitcoin mining market conditions in Q3 2024 present an exceptional investment opportunity, as miner prices are low, Bitcoin has recently dipped and Infinity Hash's new flare gas location is ready for immediate miner deployment. **The maximum investment capacity for this quarter is set at \$600 million,** allowing substantial room for large-scale investment.

Conclusion

Infinity Hash is leading innovation in the Bitcoin mining industry with its community-driven approach, emphasizing sustainability, transparency, and ease of access. Utilizing a unique reinvestment system and low-cost energy sources, Infinity Hash offers daily rewards while ensuring long-term profitability. The share system, including Infinity Hash Shares (IHS) and the tokenized xIHS, allows investors effortless access to the Bitcoin mining sector. With strategic expansions and decreasing electricity costs, Infinity Hash doesn't only provide more than **double the hash rate per USD to investors when compared to most publicly listed Bitcoin mining companies**, it is poised for long-term success. Join us in revolutionizing Bitcoin mining and seize this lucrative opportunity!

Token Overview

Infinity Hash Shares: IHS

IHS provide daily cash flow from mining rewards at a long-term target APR of +/- 33%. These are life-time, sellable project shares with no expiry, community voting rights and always backed by real Bitcoin mining hardware. IHS is only available in our [dashboard](#).

Staked Infinity Hash Shares: xIHS

xIHS is a staked version of IHS and available in our dashboard and as a Solana token. xIHS compounds daily mining rewards from IHS and a 50% company revenue share, which results in the price of xIHS increasing instead of paying out daily mining rewards. xIHS is trading on [CoinEx](#) and [Raydium](#) and available in our [dashboard](#).
